

[< Previous](#)Unit 8 of 8 [v](#)[✓](#) 100 XP

Summary

1 minute

Nice work! With your first website under your belt, you now have a sense of how Azure works and how easy it is to bring up a system, configure some software, and tear everything down when it's no longer needed.

Azure provides services that can help transform the way your organization delivers new features to your users in ways you simply can't do without the power of the cloud.

Clean up

The sandbox automatically cleans up your resources when you're finished with this module.

When you're working in your own subscription, it's a good idea at the end of a project to identify whether you still need the resources you created. Resources left running can cost you money. You can delete resources individually or delete the resource group to delete the entire set of resources.

Continue your Azure journey

Microsoft Learn provides learning paths based on your role and interests.

You've taken your first step on the [Azure fundamentals](#) learning path. Keep going to learn how Azure services such as compute, storage, networking, and security can help you unlock the power of the cloud and create that next great breakthrough idea.

If you're currently an AWS user and would like to learn more about Azure services, refer to our [article on comparing AWS to Azure services](#) on the Azure Architecture Center.
